---

So, It would be During the period of February 6-17, 2017. However, looking back at the Activity Report we have a duplicate entry. We had originally started adding the Plaquemines Response as Choctaw Bayou. Brandi renamed it Metairie Energy oil spill last week. With everything going on this morning I didn't see her entry for Metairie Energy. Choctaw remained from last week, but we updated information.

Is there more information we can share about results of corpus drinking water?  
And I need dates for all of this. "during the week of" is acceptable.

**DATE** CORPUS CHRISTI DRINKING WATER  
RESPONSE FINAL DATA POSTING: Final lab data

from the EPA Houston Lab has been received and assimilated into data tables and maps. Data tables and maps will be shared with TCEQ via External Affairs. The data is expected to be posted on the TCEQ website.

**DATE AMARILLO PHOSPHINE INCIDENT, AMARILLO, TX:**

EPA has received the final results for the confirmative air sampling that was completed within the house. The data is being validated and upon validation completion will be shared with Unified Command. The preliminary data for the air sampling was shared with Unified Command in early February.

**DATE METAIRIE ENERGY OIL SPILL, PLAQUEMINE, LA:** The majority of free oil and oiled debris has been collected and is staged on-site awaiting disposal. Disturbance of the underwater sediment within the impacted area generates additional oil at the surface of the water. A significant amount of oil may be resting on the surface of the sediment. Sediment sampling has begun and will continue through the week. Sampling results will determine the strategy to address any submerged oil. EPA, US Coast Guard (USCG), Louisiana Oil Spill Coordinator's Office (LOSCO), and Louisiana Department of Environmental Quality (LDEQ) are performing oversight of the clean-up efforts.
